

HYDROMEGA

Most important actions from January to June 2017

The first part of year 2017 was full of the effective work in Hydromega. We began it with starting off ro-ro systems, on the next ferry produced in the RSB Shipyard. This project was carried out in the partnership of companies, working consistently for the reconstruction of the Polish shipbuilding industry.

In February our company introduced new liquid indicators adapted to work in 120°C. We also had an honour to participate in the Gazela Biznesu 2016 awards gala and to receive, once again, this prestigious title for the efficient work and the development of our company in 2016.

As a result of increased possibilities in design and production in our company, we have made one of the biggest power packs that have been made in Poland for the maritime industry purpose. Key to such big projects is having own structural office and trial station, which is adapted for certification of the regulatory compliance of sea Classification Societies.

Our another big success is growth in sales of long liquid indicators, which means growth in manufacture and new work places for many people.

In the middle of April we moved The Department of Sea and Offshore Projects from Miszewo to shipbuilding areas in Gdynia. This department has been extended by the special team of engineers. They work on technical supervision, which is essential during assembly of hydraulic systems on ships made in Gdansk and Gdynia. These actions have been made in order to fulfill the increasing demand in Polish shipyards for hydraulic systems and hydraulic drives of deck devices.

In May, proszę a modern system of hydraulic power and electric control of loading platform at stern and bow was started off and implemented on FinFerries' unit - "Elektra" which was built in Gdynia by CRIST Shipyard. A project which was carried out by our company is a positive effect of concluded agreement on Consortium for the Reconstruction and the Development of the Polish Shipbuilding Industry in which RHS is a leader.

We finished first part of year 2017 by announcing the signing of the Consortium Agreement by a Polish group of B+R Institutes and companies that have undertaken work on a specialized vehicle for Aeromobile Troops. Taken actions are a response to the anticipated demand in this product group. Our company wants to use its experience for the automotive industry by implementing specialized civilian and military vehicles.
