About ITS Hellas

Definition of Intelligent Transport Systems

The role of ITS Hellas

What is ITS Hellas...

ITS Hellas is a non profit limited company, established in 2008, in order to promote the development of Greek technology solutions, infrastructures and ITS services, thus increasing the efficiency and effectiveness of the Greek Transport System.

Member of ITS Nationals...

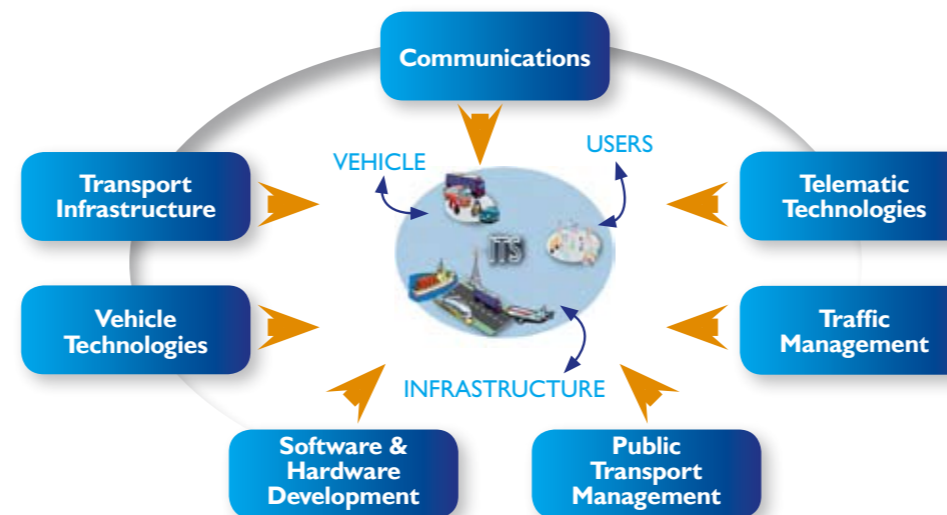

ITS Hellas is member of the Network of National ITS Associations. The Network of National ITS Associations aims to ensure that ITS knowledge and information is communicated to all related actors at local and national levels - such as small and medium sized enterprises - and to provide a bottom-up support for ITS promotion. Greece participates in the Network of National ITS Associations as one of the founding members.

Intelligent Transport Systems...

"Intelligent Transport Systems" or 'ITS' refer to information and communication technologies applied in the field of road transport, including infrastructures, vehicles and users, and in traffic management and mobility management, as well as the interfaces with other transport modes. ITS are advanced applications, which without embodying intelligence as such, aim to provide innovative services for different modes of transport and traffic management and to enable various users to be better informed and to make safer, more coordinated and 'smarter' use of transport networks. The majority of these applications concern the use of telematics applications for fleet management, fare payment and passenger information systems.

Applications ...

ITS Hellas aims...

To liaise between its members and international organizations, such as ERTICO, and to provide related information exchange

To assist state authorities on any issues related to ITS and transport and on formulating and designing ITS related strategies and policies

To disseminate information to its members and to the wider society on issues related to ITS, new opportunities, collaboration possibilities, etc.

To inform its members about funding opportunities for research and development projects provide by national, European and international funding mechanisms

To promote the added value of ITS technologies and to demonstrate the necessity for large scale deployment

To create working groups for major social, technological, political and financial issues related to ITS
