

GEO-ENERGY EUROPE project meeting in Celle, Lower Saxony, Germany

Celle (Germany), September 14, 2018 - The European network "Geo-Energy-Europe", where GeoEnergy Celle is the German representative, also met at the edge of the Celle Drilling 2018 Conference earlier this week. Already on Monday, the consortium partners of the EU-funded project arrived in Celle and visited the Celle Drilling School and Drilling Simulator Celle. In addition to the regular exchange of experiences and project work, the program included the presentation of various Celler companies and attendance to the opening session of the "Celle Drilling" Conference on Tuesday.

The participating eight geo-energy clusters from France, Germany, Hungary, Spain, Ireland, Belgium and Turkey particularly focus on supporting small and medium-sized enterprises in transnational cooperation. The aim is to accelerate developments and internationalization, to exchange experiences on deep geothermal energy and to facilitate the transfer of technology and know-how between the companies.
